Wetlands and Watercourses

Data sources
 This map depicts Inland Wetlands and Tidal Wetlands Soil as mapped by the USDA Natural Resource Conservation Service. Tidal Wetlands shown are subject to a 50-foot building setback. Inland Wetlands are buffered by a 100-foot Upland Review Area. The Wetlands and Watercourses Map delineates the general location and boundaries of identified natural resources, improvements, and regulated areas for information purposes only. The actual distribution of wetland soil types and watercourse channels shall determine the precise location of regulated areas in the field.
